

TRACE EYE-D®

Chlorate Oxidizer Explosive Detection Training

CO40 Wipes (TWO-PART POUCH)

CO40 // OVERVIEW

WHAT CAN CO40 WIPES DETECT

- chlorates

WHAT FORMS CAN CO40 WIPES TEST

- powders, pills, liquids, residues, trace, and bulk

COLOR-CHANGING TECHNOLOGY

- When CO40 comes in contact with chlorates, it turns deep purple

Note: The Trace-Eye-D kit is intended to be used for **presumptive identification purposes only**, and all substances tested should be subjected to more definitive examination by scientists in a properly equipped crime laboratory.

CO40 // HOW TO USE

Open. Wipe. Look.

Reduce cross-contamination and exposure to CO40, test surfaces and samples by wearing industry-standard personal protective equipment (PPE) such as nitrile gloves, eye protection, and N95 mask equivalent.

1

ACTIVATE + OPEN the pouch and remove the wipe.

1. Fold bottom portion of pouch in half.
2. Squeeze folded portion until frangible seal breaks. User should hear a "pop" sound when internal seal breaks.
3. Thoroughly work the liquid from the upper small chamber down into the bottom chamber containing the towelette.

Do not unfold towelette before or after use. Doing so will result in difficulty observing the results.

2

WIPE it across the surface to be tested. For best results, sample very small amounts of the substance on the margin of the wipe.

3

LOOK to see if the formula on the wipe changes color.

Allow up to 30 seconds to allow a color reaction to develop

- negative result // no color change
- positive result // test turns deep purple

**If testing a suspected substance that is suspended in an oily base (e.g. RDX in petroleum jelly), a delay in the results may be experienced. The medium in which the explosive/oxidizer is suspended will delay results.*

CO40 // RESULTS

Open. Wipe. Look.

NEGATIVE Result
no color change

POSITIVE Result
test turns deep purple

CO40 // POST TEST

Open. Wipe. Look.

All TRACE EYE-D products are safe for disposal in the common waste stream without neutralization or other special treatment, provided the wipe is not contaminated with explosive residue

- 1** **PHOTOGRAPH + STORE** the wipe with a date/time stamp, if required for evidence retention, as the color of the wipe may change over time.
- 2** **DISPOSE** of wipe in accordance with federal state and local environmental laws. No neutralization is required. Can be disposed of in the common waste stream.
- 3** **WASH HANDS + CHANGE** your gloves before conducting additional tests after a positive result is found.
